Mr. Walsh:

On September 25th U.S. EPA took several photographs of DuSable Park. Please see the attached link to view those photographs. U.S. EPA has several questions about the images captures in these photographs and some general questions about the site.

A concrete pad and three concrete posts (visible in Photo 1 - only two posts are visible in Photo 2) are visible. Both photos show that wood forms are intact around the concrete pad indicating it was recently poured. When was this pad poured? How deep is the pad? How deep are the concrete posts? When were they installed? Were soils monitored prior to installing the pad and posts? If yes, by whom?

Additionally in Photos 1, 3 and 4 a SuperSak is visible on site. What does this SuperSak contain? When was it placed at DuSable Park?

Please inform U.S. EPA whether the Park District has negotiated a more extensive agreement regarding DuSable Park since our last meeting. Has the Park District sold the property? Please provide the PIN number for this parcel.

As I indicated in my voicemail message, I will be out of the office until Tuesday, October 9th. If you have any questions you can contact Mary Fulghum at 312-886-4683 before Oct. 9th or me at 312-886-7166 on October 9th.

Sincerely,

Cathleen R. Martwick
